It is a very valuable study. If possible, answer the following questions:

Introduction:

State the age difference of organ donors between the countries of Spain and Iran.

What are the main causes of brain death in the mentioned countries?

Method:

Was the brain death risk perception the same among households with motorized and non-motorized vehicles? Was this taken into account when choosing examples for training?

Discussion:

Examine the issues raised in age differences and the main causes leading to brain death in countries with a high number of organ donors and in Iran.
