

# Review of: "Vimentin Regulates Collagen Remodeling Through Interaction with Myosin 10"

Houcine Dab

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

The authors investigated interactions of Myo10 with Vim in migrating cells

The manuscript is carefully structured and well written and the findings are significant

I consider that the study parameters are appropriate and complete.

I recommend publication of the paper.

I have two small queries

1. the objectives of the work must be presented more clearly in the summary
2. what about TIMP-2 role in pericellular collagen degradation and cell migration
