The paper can be accepted as it is. The author evaluates how well the sustainable agricultural methods, which may be used in order to reduce the effects of the climate change on Turkish agriculture. Within the study, a thorough research methodology, which combines economic modeling, policy analysis, and literature reviews, is used. The author studies the results of sustainable agricultural practices, assesses Türkiye's environmental regulations, and evaluates the impact of economic indicators on the climatic resilience of the agricultural sector.

Just one recommendation to the author that to replace "Turkey" with "Türkiye".
