

Review of: "Prevalence and Determinants of Hypertension Among Adults in Urban Bonaberi District of Douala, Cameroon"

Sally Mahmoud

Potential competing interests: No potential competing interests to declare.

The title:

The title is quite suitable.

Abstract:

The structured abstract is a genuine summary of the article.

The introduction:

It covered the burden of high blood pressure and related risk factors in Cameroon during the last 2 decades (2002-2022).

The magnitude of this disease in urban Sub-Saharan Africa and the world was also highlighted.

The tables summarized the findings in an easy way to follow.

Results:

This questionnaire-based study managed to assess awareness of hypertension among adult Cameroonians living in the Urban Bonaberi District of Douala.

Prevention strategies.

Limitations:

I suggest that the limitations of the study be given in 3 to 4 points instead of the lengthy narration.

Finally:

I recommend publication of the paper after shortening the limitations.
