Potential competing interests: No potential competing interests to declare.

1. The title could be changed to "Phytochemical Analysis and Antioxidant Activity of Leaf and Stem Bark Extracts from *Berchemia zeyheri* — A Swazi Medicinal Plant."
2. For clarity, a scheme of extraction should be provided (2.3).
3. The qualitative phytochemical analysis (2.5) should be described briefly. What kind of method was used?
4. What kind of statistical analysis (2.7) was conducted (SPSS is just a software)?
5. The authors mentioned that among the leaf extracts, E3 showed the highest scavenging activity and E1 showed the lowest scavenging activity at all concentrations, whereas among all stem-bark extracts, E8 showed the highest scavenging activity, followed by E9, and E1 showed the lowest scavenging activity at all concentrations. Please give an explanation or discussion about that.
