Review of: "A Probability-Based Algorithm for Evaluating Climbing Difficulty Grades"

Puja Supakar

I have some observations regarding the revision version of the proposed manuscript which are given below:

1. **Abstract and Conclusion sections should be improved.**
2. **What are the closely related articles, and how does this study contrast? Add a table in the literature review to justify the answer.**

1. **Give motivations and novelties in the introduction section. It can be added as a subsection.**
2. **Highlight the more applications of the proposed study.**
3. **Please highlight the contributions at the end of the introduction using a bullet point list.**
4. **Enhance the managerial insight by including a real-case study of your study.**
5. **Authors should include some discussions on the limitations of the proposed work.**
