Potential competing interests: No potential competing interests to declare.

The article by Gaudek et al. is an interesting case series of patients affected by post-COVID syndrome, showing subjective symptom relief after the administration of an immune-stimulating bacterial extract. Unfortunately, there is absolutely no description of the applied drug. Another important concern is the lack of the total number of patients treated for similar symptoms. The use of abbreviations is maybe too abundant and sometimes unusual. For instance, the K5-S1 vertebrae could not be rather L5-S1? We are eager to read the results of the promised large-scale trial.
