Potential competing interests: No potential competing interests to declare.

The document quality requires significant improvement, as it currently resembles more of a summary of research papers than a systematic literature review. The lack of information on the methodology employed and the primary practical implications of the study limits its academic value. It is suggested to expand the content to address more comprehensively the methods used in the research and highlight key practical implications. This will enable a deeper understanding of the scope and relevance of the study, thus enhancing the document's contribution to the academic field.
