Granular Cell Tumor of the Sellar Region

National Cancer Institute

Source

National Cancer Institute. *Granular Cell Tumor of the Sellar Region*. NCI Thesaurus. Code C7017.

A generally benign intrasellar and/or suprasellar mass arising from the neurohypophysis or infundibulum. It is composed of nests of large cells with granular, eosinophilic cytoplasm due to abundant intracytoplasmic lysosomes. It generally has a slow progression and lacks invasive growth. (Adapted from WHO)
