Dear authors, I appreciate the effort you put into writing the paper. I give you some suggestions that I think would improve the quality of your work:

- 1) The literature review is very scarce. This part should be significantly improved. The authors should better explain the observed research phenomenon, and indicate the findings of previous research, and it would be desirable to define the hypotheses.
- 2) It is necessary to point out the practical and theoretical implications of the research. That section is missing.
