Nowadays there has been a great deal of interest on the use of antioxidant nutritional substances from plants, because these bioactive molecules are found safe and non toxic. For that reason, researchers are guided to look for and discover new drugs from plants. The current paper deals with: [Unravelling the Phytochemical and Pharmacognosy Contour of Traditional Medicinal Plant: Pterocarpus Marsupium Roxb](#). I found the subject very interesting, in the field of phytochemistry of plants but some minor revisions should be done to improve the manuscript. You will find below my remarks that should be taken in consideration:

1. Can you please give some examples? (Reference 1)
2. In Introduction section, the second paragraph without reference, can you add it please. In the last paragraph also at the same section
3. In taxonomic classification section, can you add please a small introduction in this part. you put a table without title and number
4. *P. marsupium* should be in Italic (table 2)
5. I recommend also, in each paragraph of biological activities of the plant to add a sentence about the ailment.
