Potential competing interests: No potential competing interests to declare.

I found very interesting the argument of this work. About the procedures used, I don't have suggestions to give you; the logical structure adopted is good. Instead, I suggest adding some rows about thermal stress conditions perceived by the human body. For example, you could add this work: "Evaluation of bioclimatic discomfort trend in a central area of the Mediterranean Sea".

Regarding the figures and tables, you must adjust some parts that I list for you:

For figures 1, 2, and 3 you have to add measurement unit written in the correct form [°C];

Also in Table 2, you have to add measurement units as in Figures 1, 2, and 3.

Figure 4 is not clear, it's blurry.

Figure 7 "5-year avera..." it's necessary to write the entire word.
