Ovarian Luteinized Thecoma Associated with Sclerosing Peritonitis

National Cancer Institute

Source

National Cancer Institute. *Ovarian Luteinized Thecoma Associated with Sclerosing Peritonitis*. NCI Thesaurus. Code C126321.

A rare usually bilateral luteinized thecoma that arises from the ovary and is associated with sclerosing peritonitis. It occurs mostly in premenopausal women. The ovarian tumor is benign but patients may develop intestinal obstruction due to the sclerosing peritonitis.
