Potential competing interests: No potential competing interests to declare.

This document deals with a current theme, such as water supply in Egypt. The subject is important, and the manuscript is well-written with a few comments :

1. The title does not correspond to the content of the work ;
2. The research does not contain significant scientific value in its field. I suggest considering this study as a case study report ;
3. The abstract needs to be in one paragraph ;
4. Lack of a workflow of the methodology ;
5. I didn't find the GIS application ;
6. The figures are of poor quality ;
7. The maps do not include geographical coordinates or orientation, and the titles are very general ;
8. The situation figure of the study area is not clear and needs to be redone ;
9. The third figure has no number or title and is not mentioned in the text ;
10. List the abbreviations and avoid them in the abstract ;
11. The references are found in the list, but not mentioned in the manuscript.
