

Review of: "Artificial Intelligence and Digital Technologies in the Future Education"

Ruchi Mittal

Potential competing interests: No potential competing interests to declare.

The paper provides a well-organized and informative study on the benefits and limitations of introducing AI in education, including the role of computers, soft computing, e-learning, and connectionism. It presents a clear background on AI and digital technologies and their importance in the Fourth-Industrial revolution. However, the weakness of the paper is that it does not bring new literature on AI after 2020, specifically Generative AI and Transformer models. Despite this, the paper is a great contribution to the field of AI and future education.
