Potential competing interests: No potential competing interests to declare.

The paper is well written and well organized. It is very obvious that substantial time and effort were spent to bring it all together. I was impressed of the quality of the figures and the diagrams provided! The idea is genuine, and the results seem promising. However, I would like to see under Section 2 (Methods) more content about the algorithms(s) in just plain pseudo code to better help the reader understand the method. I think this is the only thing missing from the paper. Another minor comment I discovered while reading is:

Section 2.0: Line 6: (has no matching) parenthesis: (over-sampling the minority class ...
