Potential competing interests: No potential competing interests to declare.

The article provides an expansive investigation into the CSR research landscape in China, shedding light on various clusters of interest from 2006 to 2022. However, there are certain areas where improvements can be made. Firstly, while addressing the broad trends, the article seems to miss a granular analysis of cultural influences on CSR developments. There is an inherent risk of oversimplifying the nuances and intricacies of Chinese cultural values when they are not holistically integrated into the research.

Another potential shortcoming is the limited comparison of China's CSR developments with global standards. By integrating a comparative dimension, readers could better discern China's unique trajectory and its implications for global business practices. Furthermore, while commendable, the current focus on technological advancements and policy shifts may benefit from a more nuanced examination of the immediate repercussions these have on the operational aspects of businesses, especially multinational corporations.

Suggestions for enhancement include a deeper integration of cultural studies into the research framework, providing readers with a more comprehensive understanding of how Chinese cultural paradigms influence and mold CSR trends. Additionally, implementing a comparative lens to juxtapose China's developments with global CSR benchmarks might offer more insightful revelations about China's position in the global CSR landscape. Lastly, considering the rich qualitative data available, integrating qualitative methodologies alongside the proposed bibliometric methods would provide a more well-rounded analysis, capturing the subjective nuances that numbers might miss.
