Thank you for writing this manuscript

Some comments:

- The title is too long. It could be changed to, for example, "Giardia lamblia and Associated Risk Factors Among Patients in a Teaching Hospital, Ethiopia."
- Methods need more sentences in the abstract.
- Sample size is not representative and needs more samples.
- Conclusion should be changed - conclusion is not repeating results.
- Using the sentence 'seeking stool examination,' I think it should be changed to better words, for example, "for the purpose >>>" examining stool, etc.
- More details are needed to describe the type of study design and sampling, and the details of how the approach was taken for the questionnaire.
- Too many tables and should be restricted to a smaller number.
- Update the references to new, up-to-date manuscripts related to the topic.
