Review of: "Exploding AI-Generated Deepfakes and Misinformation: A Threat to Global Concern in the 21st Century"

Mihovil Bartulovic[1]

1 Carnegie Mellon University

The article provides an extensive analysis of the challenges posed by AI-generated deepfakes and misinformation. It examines the evolution, types, societal impact, and detection techniques of deepfakes, delving into their ethical and legal implications. The paper emphasizes the need for public awareness, technological solutions, and regulatory measures to counter the risks deepfakes pose. The article is comprehensive, blending technical insights with societal concerns, making it a valuable resource for understanding the multifaceted issues surrounding deepfakes and misinformation in the digital age.

The article is easy to read and understand. It educates the reader about the ins and outs of deepfakes. However, I am reluctant to call this a research article; it's more of a magazine-style article aimed at educating rather than pushing the boundaries of what's known.

Overall, it is an interesting article, but I feel it falls short in terms of reviewing all aspects of deepfakes. It scratches the surface on many topics but does not delve deeper into any particular field.
