# Review of: "Quantifying Water-Food Nexus (Water Footprint) for Food Crop Production: A Case Study of Addis Ababa City"

Jonae Wood<sup>1</sup>

1. North Carolina A&T State University, United States

Thank you for your contribution; the paper was well written, interesting, digestible and easy to follow.

The topic is very innovative and important. Here's a few minor problems:

## Introduction

1. Paragraph 6: define FAO

## Materials and Methods

2.2 Consider the structure of the paragraph on evapotranspiration so that you are defining the abbreviation first.

## Results

The graphs provide a good visual representation of what is being discussed in the paper. They did a good job of enhancing the overall understanding of the manuscript.
