Appreciation to the authors for drafting the contents under the title "SUDA energy autárkeia system." The technical content presented in the manuscript is vague, which makes the review process tough. The manuscript is lacking the following essential things. Authors are recommended to work on these and revise the manuscript:

1. What is the motivation to carry out the research work on the proposed title that sheds light on the existing problem/issue?
2. Is there any existing solution, and what are the drawbacks of the existing solution?
3. How will the proposed work provide a better solution?
4. What are the technical contributions to the scientific community?
