

Review of: "The Global Impact on Health of Dental Infections and Antibiotic Resistance:A mini Reveiw"

Dr. Ayodele Adeyemi Emmanuel Adedaja

Potential competing interests: No potential competing interests to declare.

The review is currently not up to par in terms of quality. For it to be considered standard, the author needs to make some significant changes. To ensure that the references correspond with the statements, the author must do a thorough assessment of the literature. There is almost no awareness of the works being cited in the references that were employed. For the readers' further understanding of the study, there should be statistical analysis, detailed discussion and conclusion. There is ambiguity regarding the study's funding. It looks like the paper is a synthesis of some prior research. There is a lot of work ahead for the author.
