Potential competing interests: No potential competing interests to declare.

The author has carried out a constructive study in handling imbalance dataset using various classification algorithms. The author has analyzed health care dataset and has concluded extensive model evaluation is required to determine the best model performance invariable of balance or imbalance dataset. The effort taken by the authors in giving deep analyses is appreciable.

However, the author can consider below points to improvise the paper quality. The points as follows:

1. The papers lack novelty, the author can improvise by introducing a new model or any hybrid approach with same parameters.
2. The usage of personal pronouns like 'We' can be avoided.
