I would like to add the following comments to be considered when revising the paper:

1- the abstract needs to be revised in terms of English and structure. Since in the abstract you must declare the following: the problem statement, the findings, and the contribution!

2- In general, the paper needs to be improved in terms of English writing.

3- In section (2.1) methodology, the authors must identify the location of the temperature control in the hospital.

4- In table 1, the term "**Reference Maximum Solar Radiation**" ? is not clear? Needs to be revised and checked the value? (or: ...and check the value?)

5- The authors must identify the current hospital management system clearly.

6- The authors need to provide the annual temperature data of the hospital to give a clear vision of the operating temperature in the hospital.
