

Review of: "Evaluation of in vitro and in vivo toxicity of pristine molybdenum disulphide nanosheets in Swiss albino mice"

Iftekhhar Hassan

Potential competing interests: The author(s) declared that no potential competing interests exist.

The manuscript looks a well planned study with good execution of experiments to draw the conclusion. However, following improvements should done the revised manuscript:

1. Inclusion of ethical clearance number or any supporting document is must to report any animal based study.
2. There are numerous spacing mistakes between words throughout the manuscript.
3. What is Table I for? What is vital organ indices? Please clarify the legend.
4. In figure 7, what is the source of splenocytes? Was spleen cell suspension was prepared or spleen cell line used for the study. It should clearly written in the methodology section.
5. The conclusion looks lengthy. It should be shortened and concise. However, its remaining part can be assimilated under discussion.
