

# Review of: "A Law for Irreversible Thermodynamics? Synergy Increases Free Energy by Decreasing Entropy"

Roberto Bruno<sup>1</sup>

<sup>1</sup> University of Calabria

**Potential competing interests:** No potential competing interests to declare.

The paper deals with a review concerning the role of Synergizing processes to use among different disciplines including proposals for a quantitative evaluation. The paper is interesting, anyway it needs to be slightly reorganised. For instance, the second last period in the introduction section should be moved to Results and Discussion. Last but not least, in the paper many self-citations have been used.
