Aggregatibacter segnis

National Cancer Institute

Source

National Cancer Institute. *Aggregatibacter segnis*. NCI Thesaurus. Code C86135.

A species of facultatively anaerobic, Gram negative, rod shaped bacteria assigned to the phylum Proteobacteria. This bacteria is catalase positive, oxidase negative, requires V factor but not X factor to grow and xylose is not fermented. A. segnis is a commensal organism of the oral flora and is rarely pathogenic.
