Potential competing interests: No potential competing interests to declare.

I have some minor concern:

1. Add some main finding in the abstract and also add one or two lines about singnificance of present study which show why you choose this topic.
2. The keywords are not uniform because some keywords are start capital and some capital and small letter both.
3. The introduction. The authors should make it clear why this study is novel. Its contains very few references so I suggest to add recent published articles.
4. In the Introduction, the literature review was not logically organized and all literatures cited seem separate descriptions without connections. The readers can't know what the state-of-art methodologies or gaps the current study plans to resolve or fill, and how significant or what contribution the current study is?. Rewrite the last paragraph of introduction section and make it concise which contains the objective, novelty, motivation, and why you choose this problem.
5. Must add future direction of your research.
6. Consequently, it is important to call your attention to the fact that all the sections must be logically connected. Based on the fact that the outcome of a research, after published, is cited and built-upon in the world, it is very important to improve the quality of presentation. Consequently, you need to
 - (a) connect the title to the abstract
 - (b) connect the abstract to the introduction
 - (c) prepare the introduction to accurately lead to the analysis of results.
 - (e) conclude the report based on the facts you have analyzed and discussed.
