This is a much needed brief commentary paper on the various versions of the COM-B model. The authors have explained the various versions well, aiding the reader's understanding of how and where the models are different. The COM-B is not just used in academia- it is very heavily used in non-academic contexts such as research taking place in industry and for that audience, the paper would benefit from addition of examples of when one version of the model might be preferable over another. Ditto for the table- the explanations appearing in the last column are really helpful and would be complemented really nicely by the addition of practical examples to guide the non-technical reader to appropriate use of the model.
