

Review of: "[Research Note] Dengue – Therapeutic Efforts in Mexico"

Felipe Lima Dos Santos

Potential competing interests: No potential competing interests to declare.

The topic reported by authors is important to the thematic area of public health. However, the authors are not clear in reporting this research note.

- 1) The abstract is shorter and does not provide a better overview of the study.
- 2) The authors must conducted a in deep literature review about the theme.
- 3) I suggest to the authors reading the manuscript carefully, since there are many little mistakes that could be solved easily by the authors. The manuscript requires professional editing in the English language to make it easy to read and understand.
- 4) The authors stated about the acronym CINVESTAV but the reader does not know the meaning. I suggest to write in full the meaning of the acronym.
- 5) This research note is based from an in vitro study, but it is not clear in the report. The authors just mentioned it in the last paragraph.
- 6) The paper is very confused in some parts.
- 7) There is bias of validity, this research note is based in a single group and it does not be generalized.
