**Potential competing interests:** No potential competing interests to declare.

The article is very well written and clarifies several misunderstandings about neoliberalism, using a broad and consistent bibliography. In addition, it contributes to the debate in the field of economics and in the field of social sciences strictu sensu (sociology and political science, especially). However, the article does not address a particular lineage of interpretation of this phenomenon, based on the late work of Michel Foucault, as expressed in the works of Cristian Laval, Pierre Dardot and Wendy Brown. In this sense, it has a considerable gap and is not even justified.
