

Peer Review

Review of: "Human Health Risks from Textile Chemicals: A Critical Review of Recent Evidence (2019-2025)"

Deepika Deepika¹

1. Institut d'Investigació Sanitària Pere Virgili, Tarragona, Spain

The review focused on synthesizing evidence related to textiles, including PFAS, metals, and other chemicals, specifically focusing on vulnerable populations, is well written. The author has provided the regulatory framework as well as mechanistic insights. Each section has sufficiently described the adverse effects as well as the current regulatory limits by European and US agencies for each chemical. The manuscript can be accepted for publication after minor revisions.

1. Abbreviations can be provided at the beginning or at the end for ease of readers.
2. A nice figure or graphical abstract could give a comprehensive picture of the review; it can also include the overall pipeline or search strategy followed.
