Potential competing interests: No potential competing interests to declare.

- 1- All graphics in the article should be more professionally designed
- 2- It would be better if a photo of the sound measuring device is included.
- 3- In which time interval and for how long sound measurements were made, such data is missing in the method section
- 4- Plate 1. Generators as a major source is placed in the wrong place, it would be better if it is placed in the findings section.
- 5- Literature information such as noise definition, measurement, effects of noise on humans should be added to the introduction.
- 6- The references utilized should be increased.
