**Potential competing interests:** No potential competing interests to declare.

This manuscript represents a new way (partitional approach) for interpreting quantum mechanics, as "the Literal Interpretation of quantum mechanics".

The manuscript is well written and, in my opinion, can be published after considering the following minor remarks.

1. In page 2, Sec (2), second line, "A equivalent definition" should be an equivalent definition.
2. After references must be punctuated in all of manuscript as a sample in page 4 in 6th line, "what size is to a set." [33, p. 67]" would be what size is to a set" [33, p. 67].
3. Equations should be numbered.
4. At page 4 in the end of 18th line, "theory, i.e.,", in the last paragraph of page 8, "[T]he", "matrix ... are often", and other misspelled words should be corrected.
