Potential competing interests: No potential competing interests to declare.

1- Is it possible to identify what phytochemicals are involved in pharmacological activities? Not just the phytochemical classes, but the molecules per se.

2- Are anti-acetylcholinesterase and antibacterial activities associated with alkaloids? Did some research find alkaloid molecules in those plants?

3- What mechanisms are involved in anti-acetylcholinesterase and antibacterial activities?

4- I did not understand the relevance of iron being present as a nutritional factor; could you explain better?
