Potential competing interests: No potential competing interests to declare.

The authors has a good start on account of highlighting the importance of rice crop in Nigeria, effect of area, yield and production along with instability in these indicators. However, following suggestion may improve the article before final publication:

1. Abstract need to be continuous i.e in a single paragraph
2. In introduction **line 4** see and correct “ the undernourished grew by 1.5% from around 8.5% to 1.5%...”
3. In analysis of data section add at least on reference that have used CAGR technique
4. club the conclusion and recommendations in last of the paper
5. Authors need to cross check all the references listed at the end of the manuscript to make sure that all references are complete and have been cited in the manuscript text.
