# Tyrer-Cuzick Model

National Cancer Institute

## Source

National Cancer Institute. *Tyrer-Cuzick Model*. NCI Thesaurus. Code C91783.

A breast cancer risk model that incorporates both genetic and nongenetic factors. It uses a combination of extensive family history, endogenous estrogen exposure, and benign breast disease (atypical hyperplasia) in order to predict a 10-year risk of breast cancer development. (Amir, Evans, Shenton, et al., [www.jmedgenet.com](http://www.jmedgenet.com))
