**Potential competing interests:** No potential competing interests to declare.

1. The introduction is a little too long, mainly reflected in the fact that it should introduce the current research status, the defects of the current research, and the parts that need to be improved. But in the current introduction part, I cannot get this information.
2. This paper only puts forward the concept and does not carry out relevant experimental verification, so it is impossible to prove the final performance of this concept.
3. In fact, the concept of this paper is not novel enough, and the current research has been related to the multi-robot arm or multi-nozzle printing.
