Potential competing interests: The author(s) declared that no potential competing interests exist.

This is an interesting paper in which the hypothesis that in sauropods pneumatization is governed by vascularization of vertebrae is explored.

Authors give evidence of the process of a variable vascularization in some groups of vertebrates.

I suggest that a scheme of figure 2.4 of Cramer (2014) be included. It will help in figuring out how internal and external systems are connected.

Figure 5. change While for while.
