Potential competing interests: No potential competing interests to declare.

1. The objective and methodology are well-defined, focusing on qualitative exploration through case studies to understand the role of technology in enhancing safety and liveability in smart urban spaces.
2. The paper does not provide a comparative analysis of different approaches or technologies within each case study. This limits the ability to assess the effectiveness and suitability of specific design concepts or technologies in different urban contexts.
3. The paper does not address potential ethical considerations associated with the implementation of emerging technologies in urban design for safety. This omission limits the comprehensive understanding of the potential social, privacy, and equity implications that may arise from the use of these technologies.
4. The discussion section would benefit from further improvement as it should effectively fulfill the purpose of the article. It is important to ensure that the main objectives and findings of the study are adequately addressed and summarized in the conclusion section.
