## Assessing the Impact of COVID-19 on Food Consumption Preferences

The article is very informative, fruitful, and exciting.

The study design should specify briefly.

Clarify food insecurity precisely. Information about the population size in the municipality of Kira should provide. In addition, a thorough literature search on the changes in food consumption preferences caused by the COVID-19 pandemic is needed.

The sampling strategy needs to be more apparent.

It's better to present the descriptive data on the population with a summary table. Limitations of the study should be addressed in the method section.
