The manuscript is well written and clearly elaborates on the study. It is a very good effort by the research team to come out with this simple study, yet it produces very meaningful data for the world to refer to. There are a few comments for improvement:

1. The reference of 1997 could be replaced with newer data.
2. The ethical approval needs to include the ethical approval reference number, and if the study is registered with ClinicalTrials.gov, please mention it too.
3. Is there any NAFDAC number for the M.oleifera supplement? If yes, please mention it.
4. Please put the value for the recommended storage temperature.
5. 'Purchase of Supplement': Make it bold to synchronize with other subheadings.
