Potential competing interests: No potential competing interests to declare.

Overall structure

The content is structured around the introduction, followed by a discussion section, and concluding with a summary. However, a key component, the method employed and the specific setting in which the discussed principles were applied, remains absent. Providing a methodological framework and context would improve the article's completeness, and offer readers valuable insights into the practical implementation of the discussed concepts.

Abstract

1.It lacks specific details about what these complex features and mechanisms entail, leaving readers curious about the depth of information that will be covered.

2.The abstract could be more engaging by including a hook or a statement to pique the readers' interest. For instance, sharing a statistic or a real-life success story related to aquaponics could make the abstract more captivating.

3.It could benefit from a brief mention of the methodology used or the approach taken in exploring aquaponic systems. This would provide readers with a sense of the research methods employed.

4.It lacks a concluding statement summarizing the anticipated findings or contributions of the paper. Add a sentence that outlines the expected outcomes or insights to provide a sense of conclusion to the abstract

Introduction

1. Ensuring that complex terms are explained briefly within the article to enhance accessibility for readers who are less familiar with aquaponic terminology.

2.Introducing practical examples or case studies of successful aquaponic systems could add real-world context to the article. Demonstrate how these principles have been applied in various setups and the outcomes achieved would make the content more engaging and relatable for readers.

3.Including references to relevant scientific studies or research papers on aquaponics could strengthen the article's credibility. It would also allow readers to explore the topic further if they are interested in the scientific aspects of aquaponics. There are no in-text references.

4. Discussing potential problems (such as disease management, system imbalances, or environmental factors) and how to troubleshoot them would add practical value to the article.

Review

1. While individual descriptions of systems are present, a comparative analysis section could be beneficial. Highlighting the strengths and weaknesses of each system in a comparative format would assist readers in choosing the most suitable system for their specific needs.

2. Include a real-world examples or case studies of aquaponic practitioners successfully utilizing these systems could add practical value to the literature review. Demonstrating how these systems have been applied in different settings and the results achieved would enhance the content's applicability.

3. Discuss common challenges faced by aquaponic practitioners when implementing these systems and provide practical solutions. Including information on how to troubleshoot common issues would make the literature review more comprehensive and beneficial for readers.

4. Briefly mention any recent innovations or advancements in aquaponic systems. This could include emerging technologies, new materials, or unique adaptations that are being explored by researchers or practitioners. Providing a glimpse into the future of aquaponic systems would make the review more forward-thinking.

Discussion

1. The discussion could benefit from a more structured organization. Consider breaking down the content into distinct sections, each addressing a specific component or aspect of aquaponics systems. This would enhance readability and facilitate easy reference.

2. To illustrate the concepts presented in the discussion, consider incorporating practical examples or case studies of aquaponic systems that have successfully applied the principles discussed. Real-world examples can make the content more relatable and actionable for readers.

3. While the discussion mentions the importance of specific equipment requirements, it could delve deeper into key considerations for choosing equipment. For example, it could discuss factors like material quality, maintenance requirements, and potential challenges associated with each equipment type.

4. Mention any potential future developments or trends in aquaponics system design and equipment. This would add a forward-thinking dimension to the discussion, showing that the article is aware of the evolving nature of aquaponics.

Conclusion

1. While the conclusion mentions adaptability in aquaponics, it could benefit from specific examples. Detailing real-world cases where practitioners have creatively adapted techniques or materials would illustrate the concept more effectively.

2. Include a brief mention of common challenges faced by aquaponic practitioners and how the knowledge provided in the article can help address these challenges. This would make the conclusion more practical and solution-oriented.
3. Discuss potential future developments or trends in aquaponics that readers might consider as they venture into aquaponic system construction. It could involve emerging technologies or innovative methods, providing a forward-thinking perspective.
4. Add an encouraging note, inspiring readers to explore aquaponics further and experiment with different techniques. Encourage them to embrace the creative aspect of aquaponics and inspire innovation in their system designs.
5. Conclude the article by suggesting potential next steps for readers, such as further reading, joining aquaponics communities, or attending workshops. Providing actionable steps can enhance reader engagement and encourage them to continue their aquaponic journey.
6. If applicable, acknowledge any limitations in the information provided. For instance, mention if the article focuses on specific regions, climates, or scales of aquaponic systems. Being transparent about limitations can enhance the article's credibility.
