**Potential competing interests:** The author(s) declared that no potential competing interests exist.

A very comprehensive study of genomic diversity of *H. pylori* populations in different regions of the stomach. The authors have provided new knowledge on the existence of *H. pylori* variants/strains infecting patients, where these knowledge are very useful in the future management of *H. pylori* infection. The manuscript is very well written with detailed description of methodology and results. Data is very well discussed.
