The review presents an important healthcare topic. The problem of cancer as a challenge for medicine worldwide is extensively discussed, as well as the role of personalised medicine and the extremely important role and use of modern technology nowadays in supporting diagnosis and also in planning and selecting the most effective treatment.

The article includes tables and figures to facilitate the reception and understanding of the text. However, the article is long and contains lengthy chapters. Therefore, it would have been useful to introduce subsections in Chapters 4 and 9.
