Potential competing interests: No potential competing interests to declare.

1. In the Introduction section, the improvements of this study need to be highlighted compared to existing studies.
2. Although the authors provide a review of the literature on low carbon policy and emission reduction performance, low carbon economy and emission reduction performance, low carbon technology innovation and emission reduction performance, trading market and emission reduction performance, the author do not give your own insights and opinions to highlight the contributions and improvements of this study.
3. The choice of four categories of indicators in Table 1 is not reasonable because they are obviously related. How should the authors remove the distractions? And how are the indicators for each category calculated? This is important for both the study results and the reader.
4. The language needs further polishing.
