

## Definition

# Minimum personal history of intervention exposure for the same outcome behaviour population statistic

Behaviour Change Intervention Ontology (BCIO)

**Definition:** The minimum of personal history of intervention exposure for the same outcome behaviour in a population.

*This definition was imported from the Behaviour Change Intervention Ontology (see <https://bciosearch.org/>).*

*Comments and suggestions for improvements are welcome using the Qeios review system.*

*Definitions imported from the Behaviour Change Intervention Ontology (BCIO) are what are known as 'ontological definitions'. See this article in Qeios for an explanation <https://www.qeios.com/read/YGIF9B>.*

*Ontological definitions can sometimes be hard to read. In those cases we also include an informal definition.*

*Definitions also often require elaboration to make it clear how they should be used and what they include. In those cases we include a comment.*

*Also, definitions sometimes require an explanation as to how they came about to help users understand how they relate to alternative definitions. In those cases we include a curator note.*
