Potential competing interests: No potential competing interests to declare.

Holistically, the grammar and punctuation of all the manuscripts need a review from the expert f.

Why were such a large number of data/sampling articles discarded, and why were only 11 left at the end out of 850 articles? Justification is required.

Review of literature from Nigeria may be included if any such work has been carried out retrospectively.

Microbiological experimentation like including the specific bacterial species and at what rate they were killed/became static may be too costly, but inculcation of some parameters and experimental design would boost the worth of the studies.

Discussion needs to inculcate the rationale use of Abs like the developed states of the world. For this purpose, policy formulation and legislation may be indispensable. Furthermore, the discussion needs to be made precise, and the heading of "pragmatic way forward" may be included.
