

# Review of: "Foundations of Science in Invasive Technologies"

Sanjay Mohapatra

Potential competing interests: No potential competing interests to declare.

Figure 1 is the foundation on which the entire article is based. Liked the conceptual framework and explanation related to Figure 1. With 8903 data points, the entire research, its analysis, findings, and practical implications are splendid. This article could have surely gone through an A+ tier journal. Loved every bit of the research work.
