Dysplastic cortical hyperostosis

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Dysplastic cortical hyperostosis. ORPHA:2204*

Dysplastic cortical hyperostosis is an extremely rare primary bone dysplasia with increased bone density characterized by lethal neonatal dwarfism with hydrops, narrow chest and short limbs with extensive cortical thickening of all long bones, ribs, clavicles and scapulae, and coronal clefts in vertebral bodies.
